Below is a summary of the discussion the Deer Stakeholder meeting had on (10/18/17 meeting). Those present were B. Benet, K. Sonen, & myself. Declined attendance or absent were B. McGee, L. Abrams, N. Hanke, L. Fig, and S. Sanzotta.

The 2018 objectives were finalized. Those present discussed a few changes raised by staff. The changes from the prior version are included in track changes and attached. Highlights are:

- Removed Chronic Wasting disease from the objective, since virtually everyone except staff had asked to have it removed.
- Modified the sterilization objective to separate into two pieces (existing zones and a proposed zone).
- Also modified sterilization objective to focus on obtaining 95% of does rather than a certain number.

Sterilization – a lesson learned from last year was the closing the Huron Hills Golf course was difficult. Seeing that there are untagged deer still in the area, staff discussed the possibility of sterilizing first within zone 1 but following up with a couple of bait site for lethal culling on the interior edge of the zone. This idea came from Dr. DeNicola since staff is recommending not to close HHGC. No decision made at this time. Reaction from those in attendance was that it was ok.

Public Park Closures – reviewed and discussed the first draft of potential park closures to support the lethal cull (see attached).

Ann Arbor Deer Management Plan – Objectives

PROBLEM:

- Deer browsing is adversely impacting beyond the tolerance level of a portion of the City's residents, the bio-diversity and sustainability of plants/animals/insects in the City's natural areas.
- Deer browsing is adversely impacting beyond the tolerance level of a portion of the
 City's residents, the residential and commercial gardens/ landscaping on private land.
- The number of deer/vehicle accidents averaged 62 over the past five years versus 41 over the five years before that.
- Chronic wasting disease in deer is present in Michigan, though not in or presently near Ann Arbor.
- A segment of the City's residents has a higher tolerance for deer, views them in a
 positive light, and is advocating for a change in the deer management program that
 includes non-lethal methods, education, and/or no action all.

LONG-TERM PLAN:

The goal of the City's Deer Management Program is to have a sustainable deer population at a level acceptable to the overall City population. To do this, the City will regularly collect data about deer and publish it on the City's website. Each data measure will have an established level (or range) which would, if exceeded, result in staff calling together citizen representatives to discuss. No City action (lethal or sterilization) is presumed to be necessary. The purpose of the discussion with the citizen representatives is to make a recommendation if 1. additional information is needed 2. if the existing data justifies any action or 3. if an action is deemed necessary, what is the appropriate action (ie. education, sterilization, lethal, other) and where. This plan/process is being implemented to establish a clear, transparent, and collaborative expectation for any future City Deer Management program in advance of Council consideration.

MEASURES OF SUCCESS:

Overall Program:

- Number of firearm related injuries associated with the deer management program is 0.
- Number of deer in Ann Arbor with chronic wasting disease is 0.
- Total number of deer/vehicle crashes reduced to 40 per year, and percent of vehicle crashes involving deer reported in the legal boundaries of the City of Ann Arbor reduced to 1.3%, assuming no major changes in total vehicle crashes.
- Reduce deer browse damage in the City's natural areas to a sustainable range of 15% to 30%, as measured by NatureWrite's field study. This measure will be regularly re-visited to reflect the latest information available.
- Maintain community-based education program about the role of deer in the local ecology and identify options for residents to manage potential deer impacts on their private property.
- Community acceptance of herd impact when 75% of surveyed residents in a Ward respond that damage to their landscape or garden plants is at an acceptable level on

Plan Objectives Page 1

- private lands. Recognizing there will be variability of this measure over time, a trend towards 75% is desired.
- Community acceptance of deer management program when 75% of surveyed residents in a Ward respond that the City's strategy of managing the deer population is acceptable. Recognizing there will be variability of this measure over time, a trend towards 75% is desired.

2018 PROGRAM SPECIFIC OBJECTIVES

MEASURES OF SUCCESS:

Educational Program & Public Right-of-Way Improvements:

- Review the City's "Fencing" ordinance and existing deer signage locations. Recommend and implement changes and improvements.
- Develop and publish an expanded deer education component to the City's deer management website, including a deer resistance gardening campaign.
- Develop an interactive information/mapping tool.
- Create and hold a public forum designed to address questions related to the City's deer management program
- Establish an on-going education program.

Non-lethal (Sterilization) Program:

- Obtain an amended permit from MDNR for a deer sterilization program.
- Ensure sterilization of at least 95% of the does in the original research areas #1 & #2 (estimated additional 15-26 does).
- Sterilize at least 95% of the does in an additional zone (estimated additional 14-25), such that the total estimated sterilizations for all three zones are estimated to be 40.
- Number of deer sterilized is up to 40 including a new zone 3.
- Mortality rate associated with sterilization less than 2%.
- Investigate with University of Michigan if there are appropriate locations for sterilization.
- Obtain a written update on the scientific results to-date on the sterilization efforts.

Lethal Program:

- Number of firearm related injuries associated with cull activities is 0.
- Number of deer removed is 250 350.
- Acceptable level of park closures remains at 75% or above.
