SECTION II - SCOPE OF SERVICES

1. Background

The City of Ann Arbor Water Treatment Services system includes a 50 MGD lime softening water treatment plant, four remote pumping stations, three water storage reservoirs, two elevated tanks, three wells, ten distribution system pressure monitoring sites, two distribution system control valves, two recreational dams, and two dams with hydroelectric generators. Treatment plant processes are controlled via PLC-5 programmable logic controllers and associated I/O with some minor subsystems controlled using CompactLogix PLC systems. The plant SCADA system is comprised of redundant servers running GE iFix software (version 5.1 with ongoing upgrade to version 5.8) distributing data to thick client type computers located throughout the plant. The internal plant communication network is a fiber optic based Ethernet main trunk with copper and fiber optic branch links. The Ethernet network and major hardware components are administered and maintained by City Information Technology (IT) staff, not by WTP personnel. Communications with remote water treatment system facilities also use this City-owned Ethernet network. The remainder of the remote facilities communicate using a Motorola MOSCAD radio and PLC system that communicates directly with the SCADA software via an RS-232 link. This radio frequency is shared with County emergency services.

2. Objective

The City of Ann Arbor is seeking a firm to act as the Owners Advisor throughout the duration of the WTP SCADA Modernization Design Build Project. The WTP SCADA Modernization Project will:

- A. Replace the existing Allen Bradley PLC-5 controllers and associated I/O in the WTP with equipment in the Allen Bradley Logix5000 family. These new PLC's will be programmed to meet or exceed the current programming functions.
- B. Implement a new SCADA software solution. As part of the initial steps of this project, this software package is currently being selected using the RFP process. This process is currently underway and a software solution is scheduled to be chosen in September of 2017.
- C. Integrate the new PLC's with the new SCADA software solution.
- D. Integrate the current Computerized Maintenance Management System (CMMS) software with the new SCADA software to share data to be used in scheduling equipment maintenance and other tasks.
- E. Integrate the current Laboratory Information Management System (LIMS) software with the new SCADA software to share water quality data between the two software applications allowing for improved analytics and reporting.
- F. Replace the hardware (servers, etc.) associated with the new software selection.
- G. Allow for mobile connectivity to the SCADA system.

- H. Update and improve the SCADA software security.
- I. Provide new graphical control screens, popups, alarms, etc. to provide a fully functional control system.
- J. Thoroughly test all new hardware, software, and programming prior to project completion.
- K. Assess the current communications with all remote facilities currently on the MOSCAD radio system and 30% design documents for new equipment and communications methods where applicable.
- L. Prepare 30% design documents for architectural modifications to the existing control room and process lab to accommodate the new SCADA system and operational philosophy.

3. Requirements

The Selected firm shall:

- A. Represent the City throughout the course of the project. Tasks may include, but are not limited to, document and design development and review, field inspection, startup and commissioning oversight, record keeping, and technical advice.
- B. Lead the development of a Request for Proposal that will be used to select the design-builder. This includes drafting the RFP, facilitating the pre-proposal meeting(s), controlling the flow of confidential information, addressing inquiries from design-builders during the proposal process, preparing addenda, developing selection criteria, and acting as part of the selection committee.
- C. Develop contract documents for a progressive design-build project, by melding components of past experience with progressive design-build contracts and City of Ann Arbor standard contracts. This includes working directly with the City Attorney's office to obtain their input and compile their comments into a final contract document for bid.
- D. Prepare a Project Implementation Plan (PIP), as defined by the Water Design-Build Council *Water and Wastewater Design-Build Handbook*, to clearly establish project drivers prior to entering into a contract with a design-build team. This document will be used to clearly identify the project delivery method, project schedule, scope of work, communication procedures, levels of involvement for all parties, and other core topics that must be agreed upon with the design-build team.
- E. Develop initial budget and cost estimates.
- F. Develop the 30% conceptual design documents for inclusion in the design-build RFP. These documents will serve as the design basis that all prospective design-build teams will use as a starting point. This design shall include items such as (but not be limited to) current and proposed network diagrams, control panel drawings showing current installation (including up to date I/O), and summaries of

programming originating from each existing control panel. It is a requirement of this RFP that the consultant shall include a proposed table of contents for this 30% design drawing set in their proposal.

- G. Develop a project risk assessment that evaluates how risk can be apportioned and managed by the project stakeholders. Include identification of risks and ways of mitigating these risks.
- H. Develop a project risk-responsibility matrix as explained in the Water Design-Build Council *Water and Wastewater Design-Build Handbook*. This document will list the activities involved in completing the project and will identify which party (or parties) is responsible for the work and how to allocate risk for potential changes.
- I. Develop 30% design documents for the renovations to the WTP control room and process lab areas to augment the SCADA equipment improvements. The existing control room and lab area were built to suit older technology and operating practices. The new layout should reflect the new technologies being introduced during this project and the modern practices of the operators.
- J. Conduct appropriate progress meetings throughout the project to capture City staff input. Prepare meeting agendas and minutes associated with all meetings.
- K. Provide engineering review of proposed designs at 60%, 90%, and 100% intervals.
- L. Provide value engineering (VE) where appropriate and review plans and designs to verify constructability and propose alternatives to design, schedule and sequencing, and cost savings.
- M. Provide quality control and construction oversight during construction and commissioning to ensure contract compliance.
- N. Lead the project commissioning and training efforts.
- O. Review and process pay applications, change orders, etc.
- P. Act as an agent for the City in dispute resolution when applicable during the course of the project.
- Q. Provide all project meeting agendas, minutes, and facilitation.
- R. Prepare and submit any applicable MDEQ, City, and utility company permits.
- S. Review project submittals, O&M manuals, training materials, and record drawings.
